

## Cleaning brushes for drill holes in concrete and masonry

### ADVANTAGES

- The steel brushes BS with bristles made of stainless steel are approved for the cleaning of drill holes in concrete.
- Depending on the required cleaning procedure, the brushes can either be used mechanically or manually using the enclosed handle.
- Caution: Prior to using, please check if the brushes still have the required diameter by using the brush control pattern. Brushes with too small diameter must not be used.
- The brushes made from polyamide are only suitable for the cleaning of drill holes in masonry.
- The brushes Ø 20/30 mm (item no. 48981) are equipped with a handle for manual use.

### ADVANTAGES

- The steel brushes BS with bristles made of stainless steel are approved for the cleaning of drill holes in concrete.
- Depending on the required cleaning procedure, the brushes can either be used mechanically or manually using the enclosed handle.
- Caution: Prior to using, please check if the brushes still have the required diameter by using the brush control pattern. Brushes with too small diameter must not be used.
- The brushes made from polyamide are only suitable for the cleaning of drill holes in masonry.
- The brushes Ø 20/30 mm (item no. 48981) are equipped with a handle for manual use.

### FUNCTIONING

- The cleaning brushes are placed into the drill hole. The drill hole is cleaned either mechanically or manually by rotating the brush and moving it back and forth simultaneously.

### TEKNİK DATALAR

Brushes for concrete (& masonry)
