

#### Dear Partners,

As fire prevention is a crucial consideration for those who are responsible for the design, specification and construction of new and refurbished buildings, fischer has developed a range of passive fire protection products, which will help to reduce the spread of fire, smoke and toxic gases, and greatly increase life safety of occupants and protection of property.

fischer FireStop is a result of many years of construction experience and the outcome of listening to feedback from our circles of customers and partners.

The entire assortment offers a comprehensive profile with all products tested to both European and international standards, with many achieving European Technical Approval (ETA) as well as Underwriters Laboratory (UL) accreditation. The complete range offers systems for linear gap sealing, cavity barriers, membrane penetrations and service penetrations, with many more time saving and bespoke solutions.

To accompany the FireStop assortment, fischer has created this International FireStop Catalogue which will allow specifiers, designers and end users a quick, easy reference guide for specifying FireStop, air and acoustic sealing systems for basic or more complex applications. This updated catalogue contains new products and solutions, installation graphics, calculation tables and an easy to view index for approvals and testing. It provides a timely solution for illustrating new products in this crucial area of the construction market.

You can take advantage of the many years of experience in passive fire protection by utilising the knowledge from one of fischer's FireStop specialists, who are available for training, demonstrations and consultancy throughout the complete design stage.

This extended product range is an exciting new opportunity for fischer, which will allow us to offer our customers a complete package solution when it comes to construction.

Yours sincerely,

Yours, Klaus Fischer

# **Good reasons to choose fischer**

# A brand and its promise to perform

Whoever chooses fischer receives more than a range of safe products. The aim is to always develop the best solutions for our customers across the globe.

Besides the innovative products, this predominantly concerns support that is focused on the customer, and services designed to improve customer benefit. With the fischer ProcessSystem (fPS), we ensure that we are adapting and optimising our processes in line with customer requirements in a flexible manner and on a continuous basis.

# Always with its finger on the pulse of the times

At fischer, innovation is more than just a sum of the patents. We are open to new things and are prepared for change – always with the aim of offering our customers the greatest possible benefits. Over the years, our own development and production sites have been developing numerous fixing solutions for the most wide-ranging applications.

Be it new production procedures or materials, such as renewable raw materials: We are carrying out the research for your safety and will continue to do so in the future. This gives us such great flexibility that we can even develop tailor-made customer solutions. This power to innovate has seen fischer become market leader in anchor technology and the fixing industry.

# Safety that connects - Decisive quality

We don't make any compromises when it comes to the safety of our products. A whole host of our products are distinguished by comprehensive, up-to-date and international approvals. The fischer product range is well-positioned in all

sectors of fixing technology – Steel, Nylon and Chemical fixings. In award-winning quality which continues to impress both professional clients and private customers with equal measure.

# Good reasons to choose fischer

# We take responsibility

Our active environment management policy means that we are helping to maintain an intact environment for our generation and for those that follow. The environment management policy at the Tumlingen site has been certified in line with DIN EN ISO 14001. We are a member of the German Sustainable Building Council (DGNB), and our products have been successively certified in line with the guidelines provided by the Institute for Construction and the Environment (IBU). With our greenline products, we have introduced the first fixing assortment in the market, based on over 50% of regrowing raw materials.

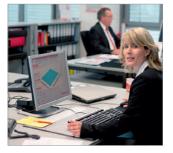

We are a reliable partner, one that will stand at your side and address your individual requirements with advice and action:

- Our products range from chemical systems to steel anchors through to plastic anchors.
- Competence and innovation through own research, development and production.
- Global presence and active sales service in over 100 countries.
- Qualified technical consulting for economical and compliant fastening solutions. Also on-site at the construction site requested.
- Training sessions, some with accreditation, at your premises or at the fischer ACADEMY.
- Design and construction software for demanding applications.

# Fire prevention

Fire prevention is a critical consideration for those who are responsible for creating the design, specification and construction of new buildings, with consideration in the ongoing maintenance of occupied premises.

As the causes of fire vary and are often unpredictable, construction measures are being designed to influence the formation and spread of fire, smoke and toxic gases, by minimising the available factors needed to create a fire or to limit the spread of fire once it has started. Effective fire fighting within a building is generally achieved through a combination of active and passive FireStop systems and, when used in conjunction with each other, provide a balanced fire protection strategy.

# Active FireStop systems

Active fire prevention systems are designed to react to the outbreak of a fire, which is then suppressed with the help of sprink-ler systems, halogen installations, fire extinguishers or other proactive mechanical systems. The effects of the fire may also be lessened by the removal of smoke from the equation. By including alarms and emergency lighting, active systems also serve to provide escape paths for people inside the building.

# Passive fire prevention systems

Passive fire prevention is an integral component, which is designed and built in to the fabric of the structure. It is also an essential element of the fire safety of a building. The risk of fire can be minimised by dividing the building into a series of compartment/cells bounded by fire rated walls and floors.

To maintain the firestopping integrity of a compartment/cells, any gaps, openings, void or channels within the fire rated walls or floors must be sealed with an approved or certified system to prevent the passage of fire, smoke and toxic gases.

# Building codes and national regulations

Most model building codes have very clear requirements on passive fire protection.

"Fire investigation reports have consistently shown that unprotected or improperly protected penetrations and joints cause millions in property damage and contribute to the loss of life and injuries due to the uncontrolled migration of fire, smoke and toxic gases." In order to promote life safety and property protection, the national building codes include fire testing and performance requirements for penetration firestop and fire resistive joint systems.

The following regulations are published as statutory instruments by Parliament with respect to life safety purposes:

#### **ENGLAND AND WALES: 1991**

Section 11.2 of Approved Document B3 states: "If a fire separating element is to be effective, then every joint, or imperfection of fit, or opening to allow services to pass through the element, should be adequately protected by sealing or fire stopping so that the fire resistance of the element is not impaired"

Section 11.12 adds, under the heading of 'Fire stopping', a requirement that: "Joints between fire separating elements should be fire stopped; and all openings for pipes, ducts, conduits or cables to pass through any part of a fire separating element should be:

Kept as few in number as possible and kept as small as practical

fire-stopped (which in the case of a pipe or duct, should allow for thermal movement)"

#### **BS 7671: 2008: UNITED KINGDOM**

The 17th edition of the IEE Wiring Regulations (BS 7671:2008) is the national standard in the United Kingdom for all commercial, domestic and industrial wiring installations.

Section: 527-02-01 states "Where a wiring system passes through elements of building construction such as floors, walls, roofs, ceilings, partitions or cavity barriers the openings remaining after passage of the wiring systems shall be sealed according to the degree of fire resistance required of the element concerned."

Section: 527-02-02 states "where a wiring system such as conduit, cable ducting, cable trunking, busbar or busbar trunking penetrates an element of building construction having specified fire resistance it shall be internally sealed so as to maintain the degree of fire resistance of the respective element as well as being externally sealed to maintain the required fire resistance."

# **GERMANY: FEDERAL STATE BUILDING ORDER**

In Germany, the Federal State Building Order is regulated at the level of the federal states. Therefore, there are 16 regional state building codes with their own regulations and guidelines. The 2002 Directive Building Code and the 2005 Directive Guidelines for conduit and ventilation systems form the basis for further consideration. The list of the Technical Building Regulations – M-ETB, includes other codes, such as the MLAR and the German Ventilation Systems Directive – MLüAR. Once guidelines are adopted into the list at regional state level List of Technical Building Regulations–LTB, the guidelines become legally binding.

#### NFPA 101 LIFE SAFETY CODE: UNITED STATES

Life Safety Code addresses those construction, protection, and occupancy features necessary to minimise danger to life from the effects of fire, including smoke, heat, and toxic gases created during a fire. The Code establishes minimum criteria for the designs of egress facilities, so as to allow prompt escape of occupants from buildings or, where desirable, into safe areas within buildings. The Code also addresses protective features and systems, building services, operating features, maintenance activities, and other provisions in recognition of the fact that achieving an acceptable degree of life safety depends on additional safeguards to provide adequate egress time or protection for people exposed to fire. Relevant firestop requirements can be found in below mentioned references:

8.2.2 Compartmentation Continuity

8.2.3.2.4 Penetrations and Openings In Fire barriers

8.2.4.4 Penetrations and Openings In Smoke Partitions

8.3.2 Continuity of Smoke Barriers

# NFPA 5000 BUILDING CONSTRUCTION AND SAFETYCODE

NFPA 5000 – Building Construction and Safety Code is a model building code developed by the National Fire Protection Association. For the most part, the requirements for fire stops are the same in NFPA 5000 as they are in the IBC. It also addresses joints between assemblies in a similar manner to the IBC. NFPA 5000 states openings must be protected by "a system or material capable of restricting the transfer of smoke". It addresses protection for throughpenetrations and membrane penetrations in Section 8.8 using the same test methods as the IBC. The requirements for F and T ratings are also the same. Joint systems, including perimeter joints at curtain walls, are addressed in the same manner as the IBC.

# IBC INTERNATIONAL BUILDING CODE: UNITED STATES

In the Past: The Regional Model codes developed by the Building Officials Code Administrators International (BOCA) were used on the East Coast and throughout the Midwest of the United States, while the codes from the Southern Building Code Congress International (SBCCI) were used in the Southeast and the codes published by the International

Conference of Building Officials (ICBO) covered the West Coast and across to most of the Midwest. After three years of extensive research and development, the first edition of the International Building Code was published in 1997. The code was patterned on three legacy codes previously developed by the organizations (BOCA, SBCCI, ICBO) that constitute IBC. By the year 2000, ICC had completed the International Codes series. Relevant firestop requirements can be found in below mentioned references:

702 Definitions

704.9 Separation of Vertical Openings - Sprinkler Exception

708 Fire Partitions 1 Hour Rating

709 Smoke Barriers 1 Hour Rating

710 Horizontal Assemblies

711 Penetrations (General)

711.3.2 Sprinkler Heads Electrical Boxes

711.4.1.2 "F" & "T" Rating Requirements

712 Fire-Resistant Joint Systems

712.4 Curtain Wall to Edge of Slab

# OTHER RELEVANT CODES FROM IBC: UNITED STATES

The International Building Code and International Residential Code are just a few of the comprehensive I-Codes the Code Council has created. The publications of the codes allow for easier following from members and allow them to observe and study the model code. Some of these codes have specific practices, such as the International Fire Code and the International Green Construction Code, or the IGCC. Here is the current list of I-Codes developed and published by the Code Council:

International Building Code

International Residential Code

International Fire Code

International Plumbing Code

International Mechanical Code

International Fuel Gas Code

International Energy Conservation Code

IBC Performance Code

International Wildland Urban Interface Code

International Existing Building Code

International Property Maintenance Code

International Private Sewage Disposal Code

International Zoning Code

International Green Construction Code.

# **OTHER RELEVANT CODE**

NFPA is responsible for 300 codes and standards that are designed to minimize the risk and effects of fire by establishing criteria for building, processing, design, service, and installation.

Some of the other widely used NFPA codes are:

NFPA 70 NEC - National Electrical Code

NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

NFPA 221 - Standard for High Challenge Fire Walls, Fire Walls, and Fire Barrier Walls

# Approvals, markings and their importance

# British Standard BS 476-20

#### BS 476-20:1987

Fire tests on building materials and structures. Method for determination of the fire resistance of elements of construction (general principles).

# BS EN13501-1

#### EN13501-1:2007+A1:2009

Fire classification of construction products and building elements. Reaction to Fire.

# BS EN13501-2

#### EN13501-2:2007+A1:2009

Fire classification of construction products and building elements. Resistance to Fire.

# BS EN1366-3: 2004

#### EN1366-3:2004

Fire resistance tests for service installations - Penetration seals.

# BS EN1366-4: 2006

#### EN1366-4:2006

Fire resistance tests for service installations - Linear joint seals.

# DIN 4102:Part1

**ASTM E 84** 

Fire behaviour of building material and elements - Part 1: Building materials, concepts.

# **American Standard**

ASTM E 84 (UL 723)

Test method for Surface Burning Characteristics of Building materials. The test evaluates the spread of flame along the surface of the material. It is not a resistance test

#### **American Standard**

# ASTM E 1966

ASTM E 1966 (UL 2079)

#### **ASTM E 1966**

Test method for Fire-Resistive Joint Systems. This test is used to evaluate the performance of a joint after a cyclic movement test and fire exposure test. UL 2079 - equivalent.

# **American Standard**

# ASTM E 814 (UL 1479)

# **ASTM E** 814

Test method for Fire Tests of Through Penetrations Fire Stops. This test is used to evaluate the performance of a firestop system, following fire exposure a hose stream test is conducted.

UL 1479 - equivalent.

# **BS EN ISO 10140**

#### **BS EN ISO 10140:2010**

The laboratory measurement of airborne sound insulation of building elements.

# **BS EN 1026**

#### **BS EN 1026: 2000**

Air permeability test method.

# **BS EN 1027**

#### **BS EN 1027: 2000**

Water permeability test method.

**CE marking** is a declaration by the manufacturer (through verified testing) that the product meets all the appropriate provisions of the relevant legislations implementing certain European Directives. ETA - The European Technical Assessment provides information about the construction product to be declared in relation to its essential characteristics.

**UL** is an abbreviation for Underwriters Laboratories Inc. which is an independent, not for profit product safety testing and certification organisation.

**UL-EU** Mark is intended for use on products destined for the European marketplace.

**FM Approvals** is an international leader in third-party certification and approval of commercial and industrial products.

Certifire is an independant Third Party Certification organisation. The scheme undertakes requirements such as the manufacturing of products under a Third Party Quality Management System, Independent Audit Testing, and a Comprehensive Field of Applications document based on careful chosen test that helps to ensure the products and systems are used within their approval scope.

# Flexible fire resistant acoustic mastic

Non combustible services

# **BUILDING MATERIALS**

- Flexible wall constructions
- Rigid floor and wall constructions
- Masonry
- Concrete
- Timber
- Steel
- FCPS System

# ASSESSMENT/APPROVAL

**British Standard** BS 476 - 20

BS EN ISO 10140-3:1995

**BS EN 1026** 

BS EN 1366-4

**BS EN 1366-3** 

# **ADVANTAGES**

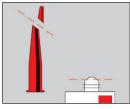

- Water based
- Low VOC
- Movement capability ± 25 %
- Excellent acoustic properties
- Approved for infinite linear gap length
- Halogen and solvent free
- Paintable and excellent slump characteristics

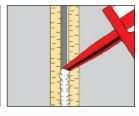

# **APPLICATIONS**

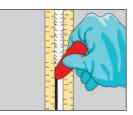

- Metallic pipes: 6" (159 mm)
- Cable trays: 18" x 2" (450 x 50 mm)
- Cable bunches: 3" (80 mm)
- · Linear joints: flexible and rigid construction elements
- Joints between FCPS coated panel system

- FiAM is a one-part water-based acrylic emulsion.
- It has a fire resistance of up to 5 hours when used in construction joints and services in both vertical and horizontal applications.
- When exposed to fire, it reacts to form a highly insulative char that slows down heat transfer and provides a barrier to fire seal.
- It is suitably compatible in a variety of materials, and is utilised within the FCPS which is designed to seal large openings in fire rated floors and walls.

# INSTALLATION

- 1. Clean all surfaces free from loose debris and contaminants and install required backing material.
- 2. Apply FiAM to required parameters as per approved system, making sure that it is in contact with all surfaces to provide maximum adhesion.
- 3. Tool sealant to a defect-free finish using a wetted trowel or putty knife.

| Copper/steel/metal pipes | 14 - 159 mm diam.               | Up to 120        | Up to 90          |  |  |
| Loaded cable tray        | 450 x 50 (tray) cables to 21 mm | Up to 120        | Up to 90          |  |  |
| Single/bunched cables    | 30 - 80 mm diam. cables         | Up to 90         | Up to 90          |  |  |

<sup>\*</sup> Copper, steel and metal pipes with an insulation rating of up to 90 minutes are in conjunction with the Thermal Defense Wrap (TDW).

# **Elastomeric fire resistant sealant**

# **BUILDING MATERIALS**

- Concrete
- Masonry
- Steel
- Timber

# ASSESSMENT/APPROVAL

**BS EN 1026** BS EN ISO 10140-3:1995 ISO 11600

# **ADVANTAGES**

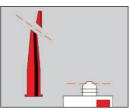

- Excellent acoustic properties
- Primerless adhesion to most substrates
- Approved for infinite linear gap length
- Halogen and solvent free
- Excellent slump characteristics
- Movement capability ± 25 %

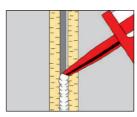

# **APPLICATIONS**

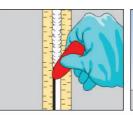

- General construction joints in floor to floor, wall to wall, floor to wall and head of wall 2" (50 mm)
- Internal and external applications

- FFRS is a one part silicone based sealant that can provide up to 5 hours fire resistance when used in construction joints.
- It provides primerless adhesion to a wide range of porous and non-porous substrates.

# INSTALLATION

- 1. Clean all surfaces free from loose debris and contaminants and install required backing material.
- 2. Apply FFRS to required parameters as per approved system, making sure that it is in contact with all surfaces to provide maximum adhesion.
- 3. Tool sealant to a defect-free finish using a wetted trowel or putty knife.

# Rapid fire resistant sealant

Facade application

# **BUILDING MATERIALS**

- Flexible wall constructions
- Rigid floor and wall constructions
- Flexible wall
- Masonry
- Concrete

# ASSESSMENT/APPROVAL

(UL 723) **ASTM E 1966** (UL 2079)

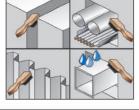

# **ADVANTAGES**

- Water based
- Flexible set
- Contains mould growth inhibitor
- Freeze thaw capabilities
- Paintable
- Accelerated age and humidity tested
- Low VOC
- Spray or brush applied
- Excellent smoke seal
- Water resistant
- Asbestos and solvent free
- Can be used for internal applications and for conditions where dynamic movement may occur.

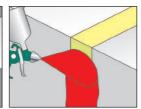

# **APPLICATIONS**

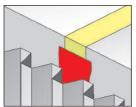

- Curtain wall/slab edge: 8" (200 mm)
- Head of wall: 4" (100 mm)
- General construction joints: 8" (200 mm)
- Cable tray: 24" x 4" (600 mm x 100
- Steel pipes: 8" (200 mm)

- RFS 640 is a spray grade one-part water-based, fire rated sealant, which has been designed to provide smoke and fire protection on construction joints and service penetrations in both vertical and horizontal applications.
- Provides up to 3 hours fire rating (also in accordance with ASTM E 2307).
- Meeting the new requirements of ASTM E 1399, RFS 640 has been cycled tested up to 500 times.
- Can be used for internal applications and for conditions where dynamic movement may occur.
- RFS 640 has also been tested at positive pressure with a minimum 0.01in. (2.5 mPa) water i.a.w UL 2079 test standards.

# INSTALLATION

- 1. Clean all surfaces free from loose debris and contaminants, and install required backing material as per approved system.
- 2. Apply RFS 640 to the required parameters making sure that it is in contact with all surfaces to provide maximum adhesion.
- 3. Tool sealant to a defect-free finish using a wetted trowel or putty knife.

| 2.00        | 51          | 82        | 548     | 37        | 167     |
| 4.00        | 102         | 49        | 328     | 22        | 100     |
| 6.00        | 152         | 35        | 233     | 16        | 71      |
| 8.00        | 203         | 27        | 180     | 12        | 55      |

The above table provides an approx. yield for a coverage of 1/16" (1.5 mm WFT) with a 1/2" (12.5 mm) overlap.

<sup>\*\*\*</sup> Is water resistant in accordance with UL 2079.

# Elastomeric fire resistant coating for construction joint and assemblies

# **BUILDING MATERIALS**

- Flexible wall constructions
- Rigid floor and wall constructions
- Concrete
- Masonry

# ASSESSMENT/APPROVAL

**British Standard BS EN 10140** 

BS EN 1366-4: 2006

**BS EN 1026** 

**BS EN 1027** BS 476-20

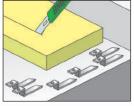

# **ADVANTAGES**

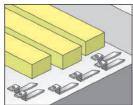

- Openings up to 20" (500 mm) wide Movement capabilities of 50 %
- Working temperature between -10 °C and 95 °C
- Can be spray or brush applied
- Air permability
- Acoustic performance
- 80 kg/m³ stone wool base
- 2.5 mm WFT required

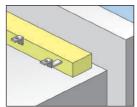

# **APPLICATIONS**

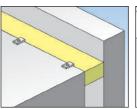

- Linear joints in construction elements up to 20" (500 mm) wide
- Floor to floor
- Wall to wall
- Head of wall
- Bottom of wall
- Curtain wall

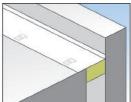

- FFB-ES is a one-part water-based acrylic coating, which has been designed to provide smoke and fire protection on construction joints in both vertical and horizontal applications.
- Developed for use on 80 kg/m³ stone wool base.
- Once applied, it prevents the passage of fire and smoke and can contribute to the acoustic value of a structure between fire rated compartments giving a fire resistance for up to El 240.

# INSTALLATION

- 1. Use rubber gloves and eye protection to avoid skin and eye contact.
- 2. Cut 80 kg/m³ x 100 mm thick rock wool to suit opening. Allow a minimum of 10 mm compression or 30 % for movement joints.
- 3. Install Z Brackets at mid section of stone wool for openings in excess of 250 mm.
- 4. Compress stone wool into opening, ensuring all joints are butted tightly and surface is flush to slab.
- 5. Apply FFB-ES via spray, brush or trowel, to minimum 2.5 mm WFT, ensuring a minimum of 12 mm overlap to slab and rear of panel/wall.

The above table provides an approx, yield for a coverage of 2.5 mm Wet Film Thickness (WFT) with a 12.5 mm overlap. Figures above are approx, guide only.

# Universal firestopping sealant which is suitable for metallic, non-metallic services and construction joints

Metallic and non-metallic pipes

# **BUILDING MATERIALS**

- Wall constructions linear joints
- Floor constructions linear joints
- Flexible wall
- Masonry
- Concrete

# ASSESSMENT/APPROVAL

ASTM E 84 (UL 723)

ASTM E 1966 (UL 2079)

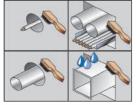

# **ADVANTAGES**

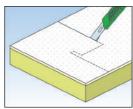

- Water based
- Flexible set
- Contains mould growth inhibitor
- Freeze thaw capabilities
- Paintable
- Accelerated age and humidity tested
- Low VOC
- Excellent acoustic properties

# **APPLICATIONS**

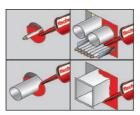

- Metallic services: steel and cast iron 20" (500 mm) - copper 6" (150 mm)
- Non metallic service: PVC 2" (51 mm open) 3" (75 mm closed)
- Insulated service: 20" (500 mm)
- Construction joints: 4" (100 mm)
- HVAC 100" (2500 mm)
- Cable bunches 4" (100 mm): busway 27" (686)

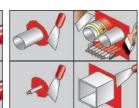

- UFS 310 is a one-part water-based intumescent sealant which is used for sealing construction joints and service penetration in both vertical and horizontal applications.
- Up to 4 hours of fire rating can be provided.
- It exhibits excellent slump characteristics, is easy to apply and cures to a flexible set. It is suitable for internal applications and conditions where dynamic movement may occur.
- UFS 310 can be used for most application properties.

# **Universal FireStopping Sealant UFS 310**

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants such as oil, dirt, grease, wax, old sealant, etc.
- 2. Install the required backing material as per the detailed instruction or approved system under compression.
- 3. Apply UFS 310 to required parameters as per detailed instruction or approved system, making sure that it is in contact with all surfaces to provide maximum adhesion.
- 4. Tool sealant to a defect-free finish using a wetted towel or putty knife.

# High performance intumescent graphite fire resistant mastic

Non-metallic pipes

# **BUILDING MATERIALS**

- Concrete
- Masonry
- Steel
- Timber

# ASSESSMENT/APPROVAL

British Standard BS 476 - 20

**BS EN 1026** 

BS EN ISO 140-3:1995

BS EN 1366-3: 2004

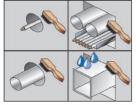

# **ADVANTAGES**

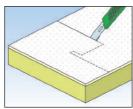

- Low VOC
- Excellent acoustic properties
- Halogen and solvent free
- Excellent slump characteristics

# **APPLICATIONS**

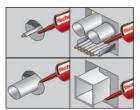

- Metallic pipes: 6" (159 mm)
- Non-metallic pipes: 5" (125 mm)
- Cable bunches: 1" (21 mm)
- Insulated service: 6" (159 mm)
- Construction joints: 1" (25 mm)
- Mixed services

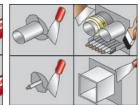

- FiGM is a one-part water-based flexible acrylic emulsion containing a high pressure intumescent graphite, which is used to seal service penetrations in both vertical and horizontal applications.
- It can expand up to 20 times its own volume and cures to form a resilient, flexible fire seal.

# **Intumescent Graphite Mastic FiGM**

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Install the required backing material as per the detailed instruction or approved system.
- 3. For best application results, FiGM should be at room temperature.
- 4. Apply FiGM to required parameters as per detailed instruction or approved system, making sure that it is in contact with all surfaces to provide maximum adhesion.
- 5. Tool sealant to a defect-free finish using a wetted towel or putty knife.
- 6. Clean all equipment with water immediately after use.

Minimum wall thickness = 100 mm

# An intumescent single or endless wrap for sealing flammable pipes

Floor application

# ASSESSMENT/APPROVAL

BS EN 1366-3

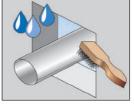

# **ADVANTAGES**

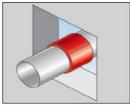

- Efficient and effective for sealing of pipe openings in floors and walls
- Easy to fit
- Moisture resistant
- No mechanical fixing required
- Economical solution
- Up to 4 hours fire resistance
- Asbestos and halogen free
- Available on a roll for more flexibility in pipe diameters

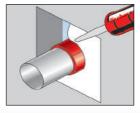

# **APPLICATIONS**

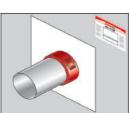

- Non-metallic pipes
- Polyvinyl Chloride PVC
- Chlorinated Polyvinyl Chloride cPVC
- Medium-density Polyethylene MDPE
- High-density Polyethylene HDPE
- Acrylonitrile Butadiene ABS

- FiPW is a flexible composite strip, which is composed of thermoplastic component containing intumescent graphite in a synthetic compound and enclosed in an outer polyethylene cover.
- Can also be used as a cast-in solution.
   For large openings, use in conjunction with FCPS or FFSC.

# **Intumescent Pipe Wraps FiPW**

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Ensure services are sufficiently supported as per approved system or local building codes.
- 3. Choose the correct size of FiPW or FiPW-E in accordance with the pipe diameter.
- 4. Wrap FiPW or FiPW-E around the pipe and fix tightly in required position.
- 5. Backfill with FiAM or FFSC as per detailed instruction or approved system.

# **APPLICATION DATA**

# Universal intumescent wrap strip for sealing combustible services

Universal metal band

# ASSESSMENT/APPROVAL

# **ADVANTAGES**

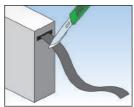

- Efficient and effective for sealing of pipe openings in floors and walls
- Easy to fit
- Moisture resistant
- Freeze-thaw characteristics
- No mechanical fixing required
- Economical solution
- Up to 4 hours fire resistance
- Asbestos and halogen free

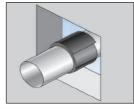

# **APPLICATIONS**

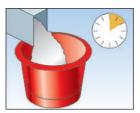

- Non-metallic service: PVC 14" (355 mm), cPVC 8" (203 mm), ABS 6" (152 mm), FRPP 4" (102 mm)
- Insulated service: Steel 10" (254 mm), Iron 10" (254 mm), Copper 4" (102 mm), Glass fibre 3" (75 mm), AB/PVC flexible foam 1" (25 mm)
- Cable bunches: 3" (76 mm)

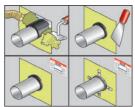

- FiWS is a flexible, intumescent graphite-based synthetic compound strip, which has been designed to be installed in both vertical and horizontal applications.
- FiWS has been developed as a PRE or cast-in FireStop solution, and has been designed to work with the fischer Universal Collar for retro fitting or surface mounted applications.
- For large openings, the FiWS can be used in conjunction with the FFSC.

# fischer 🗪

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Ensure services are sufficiently supported as per approved system or local building codes.
- 3. Choose the correct size of FiWS in accordance with the pipe diameter.
- 4. Wrap FiWS around the pipe and fix it tightly.
- 5. Backfill with FiAM or FFSC as per approved system.

# Collar for sealing a wide range of combustible pipes where passing through fire rated walls and floors

Wall applications

# **BUILDING MATERIALS**

- Flexible and rigid wall constructions
- Solid concrete floors
- Hollow precast floors

# ASSESSMENT/APPROVAL

**British Standard** BS 476 - 20

**BS EN 1366-3** 

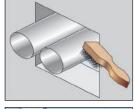

# **ADVANTAGES**

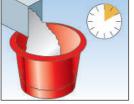

- Easy retrofit at any time
- Water resistant
- No minimum annular service required
- Pre-fixed attachment lugs
- Fold back tag for secure fixture around pipe

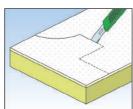

# **APPLICATIONS**

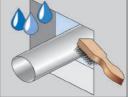

Non-metallic pipes: like PVC, HDPE, MDPE, ABS of various sizes through fire rated walls and floor assemblies

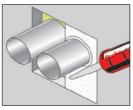

- FFC is a powder coated cylindrical steel sleeve, which contains a heat reactive graphite-based intumescent material that expands during fire.
- Designed to be securely fitted around the pipe and held in position with a retaining bolt.
- Any gaps up to 10 mm around FFC should be backfilled with FiAM or larger annular space should be closed with FCPS or FFSC.

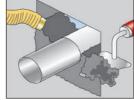

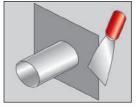

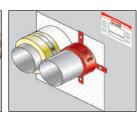

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Ensure services are sufficiently supported as per approved system or local building codes.
- 3. Close the annular space as per requirement with FiAM, FCPS or FFSC and choose the correct size of FFC in accordance with the pipe diameter.
- 4. Open the toggle clip, place FFC around the pipe with its fixing lugs pointing towards the building element.
- $\underline{\textbf{5. Lock the toggle clip and push it tightly against } \underline{\textbf{the surface of building element.}}$
- 6. Attach the collar to the building element through the mounting lugs with a minimum anchoring depth of 32 mm and minimum 8 mm diameter fixing (please refer to fischer fire rated fixing section for correct anchor).
- 7. For vertical applications, repeat installation on both sides as per the instruction in the approved system.

# Fast and efficient solution for forming service penetrations through concrete floors

# **BUILDING MATERIALS**

- Reinforced cast concrete slabs
- Some prefabricated slab systems (subject to design)

# ASSESSMENT/APPROVAL

British Standard
BS 476 - 20
AS 1530: Part 4

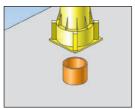

# **ADVANTAGES**

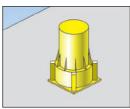

- Quick installation
- Watertight seal
- Higher tolerance
- Easily extendable
- Wider base for further connections
- No further collars or wraps required
- Reduce working at heights
- Cost saving
- Reduced foot plate
- Eco-friendly extension tube
- Closer proximity positioning

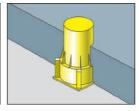

# **APPLICATIONS**

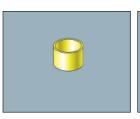

- Sealing and firestopping PVC and HDPE pipes up to 6 " (160 mm)
- Forms holes up to 10" (200 mm) thick concrete floors
- FCID and MRF creates recesses in slabs for lower positioning of soil
- Manifold units in wet room applications

- FCID is a pass through system, which is constructed from a highly resilient polypropylene material and contains a powerful intumescent graphite band.
- The FCID is rugged enough to withstand the force and load of a concrete pour, yet lightweight enough to permit easy placement and handling.

# INSTALLATION

1. Position FCID as required and attach to formwork.

# For concrete slab thickness greater than 250 mm:

- i) Remove end cap from FCID.
- ii) Using FCID extension sleeve FCID E Extension Tube, mark and cut using a fine tooth saw to required length.
- iii) Slide extension sleeve over FCID unit until it contacts side ribs.
- iv) Apply FCID E/C Extension Cap to top of the extension sleeve.
- v) Position FCID and extension assembly as required and attach to formwork.

# For concrete slab thickness less than 250 mm:

- i) Cut FCID to required depth of concrete slabs.
- ii) Place cover cap FCID CP Cap Plug on top of FCID.
- iii) Position FCID as required and attach to formwork.
- 2. Pour concrete to required depth.
- 3. On completion of concrete curing, remove all formwork and shuttering as necessary.
- 4. Remove cap from top of FCID and place pipe through FCID as required.

# SPECIFICATIONS

|                                 |        | Fits pipe-Ø        | Hight x Shell diam.                                      | Sales unit |

# FireStop solution for temporary and permanent service penetrations in both vertical and horizontal applications

Floor application

# ASSESSMENT/APPROVAL

**British Standard** BS 476 - 20

BS EN 1366-3

BS EN ISO 10140-3:1995

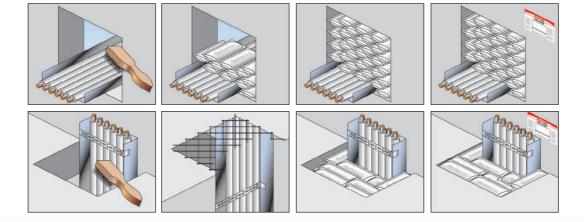

# **ADVANTAGES**

- Approved as permanent fire barrier
- Reusable
- Dry installation
- Quick and easy installation
- No shelf life
- Moisture resistant
- Up to 2 hours fire protection

# **APPLICATIONS**

- Metal pipes
- Cables/cable trays
- Electrical trunking
- Electrical trunking: for conformance with the 17th Edition of the IEE Wiring Regulations (BS 7671:2008)

- FiP is an intumescent graphite and mineral fibre blend covered in a glass fibre PVC coated cloth bag.
- FiP is suitable for applications where temporary and permanent fire barriers are required.

# fischer Fischer

# INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Ensure services are sufficiently supported as per approved system or local building code.
- 3. Shake the pillows to make the infill material uniform before installation.
- 4. Push the pillow into the hole so that the longest dimension spans across the wall. If installing in floor, mechanically fix galvanised steel mesh 50 x 50 x 5 mm to the underside of the opening with a 100 mm overlap of the floor slab.
- 5. Pack the pillows in a brick bond fashion, to ensure the joints between the pillows are staggered. Use small-sized pillows in between to pack the hole tight against the edges.
- 6. For electrical trunking, remove the lid and install a pillow inside so it aligns with the depth of the wall. Replace the lid on the electrical trunking.

# **SPECIFICATIONS**

# **Intumescent Putty Pad FiPP**

Internal application

# **BUILDING MATERIALS**

 Most flexible wall partitions constructed from plasterboard/gypsum board, timber and steel studs

# ASSESSMENT/APPROVAL

**British Standard BS EN 1366-3** 

**BS EN 1026** 

BS EN ISO 10140-3:1995

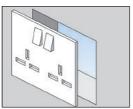

# **ADVANTAGES**

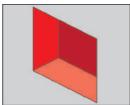

- Excellent acoustic properties
- Internal and external versions available
- Primerless adhesion to most substrates
- Robust detail part E handbook accepted
- No electrical conductivity
- Air permeability
- Quick and simple installation

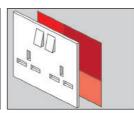

# **APPLICATIONS**

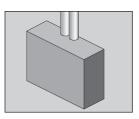

- Most flexible partition assemblies
- Fire and insulation resistance
- Acoustic sealing
- Air permeability
- Plastic and metal electrical outlets

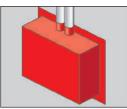

- · Can maintain the fire resistance and insulation of flexible wall partitions, where they are penetrated by plastic or metal electrical outlets and cables.
- FiPP can also be used for upgrading the acoustic performance of flexible partitions.

## **1**

# roducts

# **Intumescent Putty Pad FiPP**

#### INSTALLATION

#### Internal

- 1. Remove the face-plates of the electrical outlet.
- 2. Clean all contact surfaces so they are free from loose debris and contaminants.
- 3. Mould the preformed putty pads into the back of the box and around the cables.
- 4. Replace the face-plate.

#### External

- 1. Clean all contact surfaces so they are free from loose debris and contaminants.
- 2. Mould the preformed putty pads onto the back of the box and around the cables.

## FireStop coated panel system for multiple service penetrations

Mix penetration through floor

#### ASSESSMENT/APPROVAL

British Standard BS 476-20

BS 476: Part 22

BS EN 1366-3

BS EN ISO 10140-3:1995

#### **ADVANTAGES**

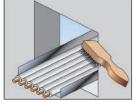

- Approved for light partition walls
- Can be installed dry
- No coatback required for services
- Excellent acoustic properties
- 4 hours integrity and 2 hours insulation
- Asbestos and halogen free

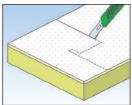

#### **APPLICATIONS**

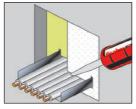

- Small and large openings
- Cables/cable trays
- Air ducts with dampers
- Metallic or non-metallic pipes

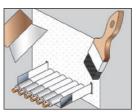

#### **FUNCTIONING**

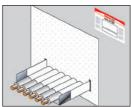

- FCPS is a rock fibre core coated with ablative sealant FPC for use in both vertical and horizontal applications.
- It maintains the sound reduction index of a structure.
- Provides up to 4 hours integrity and 2 hours insulation on a wide range of applications.
- The FCPS will allow additional services to be added or removed and will accommodate thermal and mechanical movement of services.
- FPC can be used to adhere sections of FCPS board when jigsaw assembly is required and can also be used to enhances smoke and acoustic performance.

# **Coated Panel System FCPS**

#### INSTALLATION

- 1. If opening size is greater than 1,200 x 1,200 mm then a steel angle for mechanical support should be installed as per detailed instruction or approved system.
- 2. Clean all contact surfaces so they are free from loose debris and contaminants.
- 3. Cut FCPS as per the required opening size, so that it can be fitted under friction into aperture with as few joints as possible.
- 4. Prior to installation, coat all exposed areas of FCPS with FPC.
- $5. \ In stall \ FCPS \ section \ into \ aperture \ so \ it \ is \ compression \ fitted.$
- 6. For multiple or mixed services passing through opening please use appropriate fire stopping device:
  - a. Use FiAM for metallic pipes, cables, cable trays and ducts.
  - b. Use FiPW for non-metallic pipes.

#### Structural fire resistant seal for floors and walls

Mix service penetrations

Mix service penetrations

#### ASSESSMENT/APPROVAL

**British Standard** BS 476-20

BS EN ISO 10140-3:1995

**BS EN 1366-3** 

#### **ADVANTAGES**

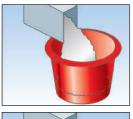

- Water based
- Low VOC
- Load bearing
- Excellent acoustic proper-ties
- Both vertical and horizontal applica-
- Halogen and asbestos free

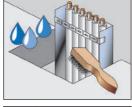

#### **APPLICATIONS**

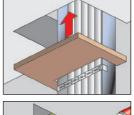

- Metallic services with steel and cast iron pipes
- Non-metallic services with FiP intumescent pipe wrap or FFC
- Voids or cavities in floors or walls
- Cable bunches

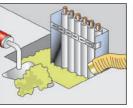

#### **FUNCTIONING**

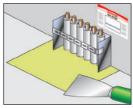

- FFSC is a specially formulated gypsum based compound, which when mixed with water can be trowelled or poured.
- FFSC can provide up to 4 hours integrity and insulation.
- Set within 45 min depending on ambient temperature.
- Capable of accommodating foot traffic within 72 hours.

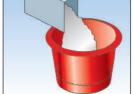

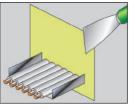

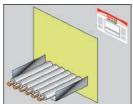

# FireStop Compound FFSC

#### INSTALLATION

- 1. Service penetrations should be rigidly supported as per local building codes or approved standards.
- 2. Clean all contact surfaces so they are free from loose debris and contaminants such as oil, dirt, grease, wax, old sealant, etc.
- 3. Pouring: Mix compound with water in 2.5:1 parts by volume. Do not mix weaker than 2:1.
- 4. Shutter into the opening to ensure a tight fit so that once the required depth of compound is installed, it finishes flush with the floor.
- 5. Mix and pour compound until the required thickness is achieved.
- 6. If the opening is greater than 1,200x1,200 mm, appropriate reinforcement may be required.

#### **SPECIFICATIONS**

| Application temperature range | +5 °C to +40 °C                         |
| Temperature resistance        | -5 °C to +100 °C                        |
| Compressive strength          | 17 N/mm2                                |
| Sound insulation              | 50 dB                                   |
| Reaction to fire (EN13501-1)  | Class F                                 |
| Shelf life                    | 12 months                               |
| European Technical Approval   | ETA 14-0387                             |
| Tensile strength              | 30/mm <sup>2</sup>                      |
| Load bearing capacity         | 1,000 mm span - 10.29 kN/m <sup>2</sup> |
| Load bearing capacity         | 1,200 mm Span - 8.57 kN/m <sup>2</sup>  |
| Load bearing capacity         | 1,500 mm Span - 6.86 kN/m <sup>2</sup>  |
| Load bearing capacity         | 2,000 mm Span - 5.15 kN/m <sup>2</sup>  |
| Thermal conductivity - EN1745 | 0.57 W/mK at 50 % /0.65 W/mK at 90 %    |
| Average yield                 | 4 bags per M2 at 100 mm thickness       |

#### APPLICATION DATA

|                  | By volume             |
|------------------|-----------------------|
|                  | Powder to water ratio |
| Pourable grade   | 2.5:1                 |
| Trowelable grade | 3:01                  |

<sup>\*</sup> These are approximate calculations based on 20 kg bags. The coverage does not take into account the percentage of the hole filled with services.

<sup>\*\*</sup> As a further safety margin, we would recommend that all floor seals with clear areas greater than 1,800 mm x 1,800 mm must be reinforced.

Load bearing note: the open area free of services: Thickness of seal ratios for non-reinforced seals given above allow an ample safety margin for normal foot traffic, e.g., loads of two men plus equipment with a combined weight up to 200 kg.

## Designed to protect the building void between the inner and outer construction elements

Installed FFB-VS Ventistop

#### **BUILDING MATERIALS**

- Concrete slabs, columns and walls
- Curtain wall assemblies
- Stone cladding, etc.

#### ASSESSMENT/APPROVAL

**British Standard** 

BS 476-20: 1987

BS EN 1363-1-TG19

#### **ADVANTAGES**

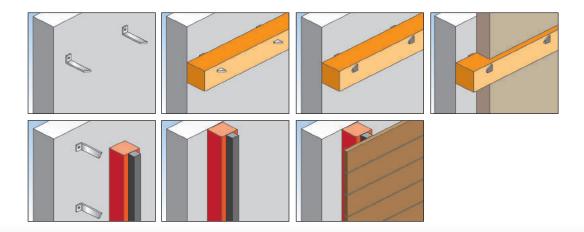

- Fire resistant testing to BS476 to 120 and 60 minutes
- Acoustic isolation on testing to EN10140 to 39 dB (non-ventilated)
- Suitable for close up to 25 mm ventilation gap
- Voids up to 450 mm wide
- Free of halogens, asbestos, fibres and silica and is non-toxic
- Life expectancy of over 25 years
- Contributes to green building

#### **APPLICATIONS**

 Horizontal and vertical cavities between the inner and outer construction elements

#### **FUNCTIONING**

- FFB-VS a foil-faced stone wool pre-cut unit, which has a powerful intumescent graphite strip bonded to the exposed face. The intumescent graphite strip is pre-wrapped with a durable polythene adhesive sheet to prevent water ingress.
- FFB-VS has been designed to provide a 25 mm air gap, that allows air flow and moisture to pass down the back of the cladding. Under fire condi-tions, the powerful intumescent along the front edge expands horizontally to close the gap and prevent the passage of fire.

# **Fire I Barr Cavity Barriers**

## A single component filler foam with effective fire resistance

#### **BUILDING MATERIALS**

- Concrete
- Masonry
- Steel as backing material
- Timber as backing material

#### ASSESSMENT/APPROVAL

**British Standard** BS 476 - 20

BS EN 1366-4

BS EN ISO 10140-3:1995

#### **ADVANTAGES**

- High foam yield
- No post shrinkage or expansion
- CFC free propellant
- Effective seal against smoke
- Rendered, cut, painted or sanded
- High bond strength
- Good adhesion to most building materials
- Excellant acoustic and thermal properties

#### **APPLICATIONS**

- Construction joints in walls and floors
- Insulating and sealing doors and windows: non-fire rated application
- Backfilling material only for service penetrations
- Filling general voids and cavities: nonfire rated application

#### **FUNCTIONING**

- FireStop Foam is a single component, self expanding polyurethane foam, which has been designed to be self curing via the absorption of moisture from the atmosphere.
- The foam has excellent adhesion properties and can adhere to most building materials. When the foam sets it cures to a semi-rigid structure, which accommodates low movement and vibration.

#### INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants such as oil, dirt, grease, wax, old sealant etc.
- 2. Dampen the substrate surfaces with clean water before application to improve adhesion and curing rate.
- 3. Protect adjacent surfaces with paper of a plastic film.
- 4. Shake the canister vigorously at least 20 time before use, and again periodically during application.
- 5. Remove the cap and screw the nozzle firmly into the connector on the top of the valve.
- 6. Gently pull the trigger to dispense foam, whilst holding the canister inverted.
- 7. Fill approximately half of the required depth of the cavity to allow for expansion of the foam. Should gaps be more than 30 mm then, apply the foam in beads and pre-moisten between layers.
- 8. On horizontal surfaces always work away from the bead and work upwards on all vertical surfaces.
- 9. Please note that cured foam is adversely effected by UV light and should be protected with a suitable paint or sealant.

#### SPECIFICATIONS

# Thermal defense wrap for high insulation and temperature stability

Cable tray application in floor

#### ASSESSMENT/APPROVAL

**British Standard** 

BS 476 - 20

**BS EN 1366-3** 

BS EN ISO 10140-3:1995

#### **ADVANTAGES**

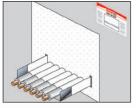

- Remains flexible -10 to +160
- Low VOC
- High insulation and temperature stability
- Pre-formed 300 mm roll
- Fast and efficient installation
- Remains flexible without aging

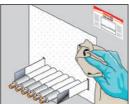

#### **APPLICATIONS**

- Metallic services with steel and cast
- General construction joints: wall to floor to head of wall
- Drywall partitions, connections
- FCPS joints

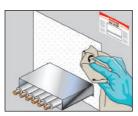

#### **FUNKTIONSWEISE**

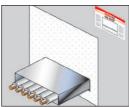

- TDW is ceramic-based technology of bio-soluble vitreous fibres and flexible organic builders, and has been designed to maintain the compartmentalisation of a fire-rated assembly.
- The unique design of the TDW allows for movement of services, maintain the necessary insulation of the services and prevents temperature, rise of the services at the cold face. At normal temperature the TDW remains flexible and permits thermal and mechanical movement.
- It provides up to 2 hours integrity and insulation.

# roducts

# **Thermal Defense Wrap TDW**

#### INSTALLATION

- 1. Clean all contact surfaces so they are free from loose debris and contaminants such as oil, dirt, grease, wax, old sealant, etc.
- 2. Measure and mark the TDW to the required service configuration.
- 3. Cut TDW as per requirements with a standard pair of scissors or snips.
- 4. Wrap TDW around service configuraion and apply alufoil tape to secure in place.

#### SPECIFICATIONS

# Ablative firestop coating design to prevent the propagation of fire along internal and external electrical cable

Application of FCC coating

#### **BUILDING MATERIALS**

- Drywall
- Concrete
- Masonry

#### ASSESSMENT/APPROVAL

IEC 60331-21: 1999

EN 60332-3-22: 2010

EN 60332-1-2: 2004

#### **ADVANTAGES**

- Water based, odorless and solvent free
- Suitable for internal and external applications
- Quick curing
- Spray or brush applied
- Halogen, fibres and asbestos free
- High yield

#### **APPLICATIONS**

- Power plants (IEC 332 Pt3)
- Telecommunication
- Industrial plants
- Petrochemical plants
- Factories and production facilities

#### **FUNCTIONING**

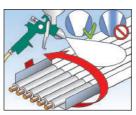

- Can be sprayed, painted, or brush applied.
- Multiple layers and overhead application possible due to its thixotropic consistency.
- Base surface should be clean, dry and suitably prepared.
- Thickness of application: see approval
- When exposed to fire, it reacts to form a highly isolative char that slows down heat transfer, and provides a protective fire barrier.

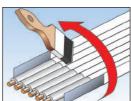

When spray applied: Min. 170 bar Nozzle spray angle 40° Flow rate 0,78 mm Liters/minute 3,5

### A guide to supporting sprinkler systems

#### **APPLICATIONS**

- Industrial companies
- High-bay warehouses
- Office buildings
- Logistics areas
- Public buildings and institutions
- Sales entities
- High-rises
- Underground garages
- Museums
- Congress and conference centres

#### **APPROVALS**

Sign of conformity VdS CFA 4001 in concrete ceilings:

#### **FUNCTIONING**

Sprinkler systems fall into the category of active fire protection (AFP) and could be considered as detection and suppression systems, which usually covers the complete floor plan. This means that sprinklers are usually installed in all rooms of a building and are designed in accordance with the actual fire hazard, the temperature - dependent opening of the sprinkler normally activates an acoustic sound and sends a signal to the fire control system. Over the past decade, sprinkler systems extinguishing rates have been high and, as a result, are standard in some types of buildings.

In general, sprinkler systems are designed in accordance with the following standards: VdS CEA 4001 Section 15.2.4 Anchorage in Concrete Ceilings, FM 1951 Section 3.2 Technical and Constructional Properties, UL 203 Section 11.3 Pipe Hangers for Fire Protection Systems, NFPA 13 Section 9.1.3 Fixings in Concrete and/or to EN 12845, which is an identical standard to CEA 4001.

ETA concrete, single, option 1 = suited for cracked and non-cracked concrete

ETA concrete, multiple = suited for cracked and non-cracked concrete

### Fire protection inspections for SaMontec products

#### **TEST CURVE**

# 

Dependency of the yield strength, proportional limit and elasticity module on the temperature (basis: EN1993-1-2:2012-12 Eurocode 3).

#### **ADVANTAGES**

- Single, multi or uniform load tested
- Full range of pipe clamps
- Rails and supports

#### **APPROVALS**

#### **FUNCTIONING**

Fire protection in buildings covers the safety of occupants, fire fighters and contents, and is regulated by the local building codes or standards. This is particularly evident in the installation of fire protection systems such as a detection or suppression, as approved or recognized components must be used. The key message is to ensure the safety of the escape route by ensuring the functioning of the supports and sub frames will remain integral for a set period of time.

The necessity for these considerations arises from the properties of the steel, which is subjected to a loss of yield when it reaches a temperature of > 600 °C and therefore components can undergo a series of resistence testing. The same information is documented in the inspection reports for a fire resistance with ratings of R30, R90 and R120, based on the standard pipe systems directive of 2005 (MLAR 2005) and according to EN-1363-1 and DIN4102-2

- 1) Valid for a suspension height ha  $\leq$  500 mm 2) Based on suspension height ha = 250mm, Expansion length of threaded rods in case of fire  $^{\sim}$  10mm/m
- 3) Given load values apply for multiple loads as summated point loads symmetrical allocated. 4) This values are valid for FCA 62/2,5 with additional support by threaded rod.

# Pict. 1 . Ω. ℴ

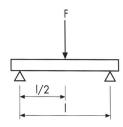

#### **APPLICATION POSSIBILITIES**

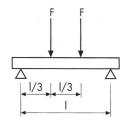

#### Point load =

Spot load, e.g. a pipe clamp on the rail.

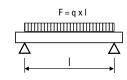

#### Multiple load =

More than one load point on the rail, e.g. several pipe clamps.

#### Uniformly distributed load =

Uniform distribution of load on the rails, e.g. bend-proof ventilation duct.

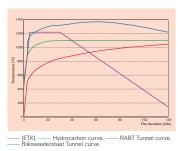

#### Fire tests of fasteners and anchors in concrete

The fire tests on anchors and fasteners is carried out into C20/25 cracked and uncracked concrete or masonry, following the standard time/temperature curve (ETK) according to DIN 4102 or ISO 834.

The anchors and fasteners have pre defined load applied and are exposed to flames without insulation or protective measures. The fire resistance is indicated by the time the anchor or fastener resist without failure.

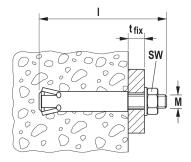

Additional ETKs can be adopted for special applications such as RABT ZTV tunnel curve.

#### Calculation for mastic/sealant

- a = Hole diameter in mm
- b = Depth of sealant in mm/wet film thickness for spray material (see recommendations)
- c = Pipe or bunched cables diameter in mm
- d = Annular space in mm (see recommendations)
- I = Length of square opening/joint
- w = Width of square opening/joint
- h = Cartridge or spray bucket size in ml
- n = Number of holes
- $e = Area of hole in mm2 = \pi(a \div 2)2$
- $f = \text{area of pipe in } mm2 = \pi (a \div 2)2$
- g = Amount of mastic needed per hole in ml =  $((e-f) \times b) \div 1,000$

#### Round holes

#### Square holes

#### Linear joints

No. of cartridges needed = n x  $(\frac{g}{h})$ Area of hole e =  $\pi$  x  $(a \div 2)^2$  mm<sup>2</sup> Area of pipe f =  $\pi$  x  $(c \div 2)^2$  mm<sup>2</sup> Mastic volume = g =  $((e-f) \times b) \div 1,000$  ml

#### Example:

- a = 90 mm b = 40 mm c = 50 mm
- h = 310 ml n = 20
- e = 3.14 x 45<sup>2</sup> = 6,361.73 mm<sup>2</sup> f = 3.14 x 25<sup>2</sup> = 1,963.50 mm<sup>2</sup> g = ((6,361.73 - 1,963.50) x 40) ÷ 1,000 = 175.92 ml
- No. of cartridges =  $20 \times \left(\frac{175.92}{310}\right)$ = 11.35 cartridges

No. of cartridges needed = n x ( $\frac{g}{h}$ )

Area of hole e = 1 x w mm<sup>2</sup>

Area of pipe f =  $\pi$  x (c ÷ 2)<sup>2</sup> mm<sup>2</sup>

Mastic volume = g = ((e-f) x b) ÷ 1,000 ml

#### Example:

- I = 90 mm w = 100 mm h = 40 mm
- b = 40 mm c = 50 mlh = 310 ml
- n = 20
- e = 90 x 100 = 9,000 mm<sup>2</sup> f = 3.14 x 25<sup>2</sup> = 1,963.50 mm<sup>2</sup> g = ((9,000 - 1,963.50) x 40) ÷ 1,000
- = 281.46 ml

No. of cartridges =  $20 \times \left(\frac{281.46}{310}\right) = 18.1$  cartridges

No. of cartridges/buckets =  $(\frac{q}{h})$ Area of joint = e = 1 x w mm<sup>2</sup> Mastic volume =  $((e-f) x b) \div 1000 ml$ 

#### Example for mastic/sealant:

- w = 20 mm
- I = 30m = 30,000 mm b = 10 mm
- h = 310 m
- e = 20 x 30,000 = 60,000 mm<sup>2</sup>
- $g = (60,000 \times 10) \div 1,000 = 6,000 \text{ ml}$
- No. of cartridges =  $\left(\frac{6,000}{310}\right)$ = 19.4 cartridges

#### Example of joint Spray:

- w = 100 mm, w1 = 125 mm (with overspray)
- I = 300 m = 300,000 mm
- b = 1.5 mm
- h = 19 litres = 19,000 ml
- e = 125 x 300,000 = 37,500,000 mm<sup>2</sup>
- g =  $(37,500,000 \times 1.5) \div 1,000 = 56,250 \text{ ml}$ No. of buckets =  $(\frac{56,250}{19,000}) = 2.96 \text{ buckets}$

#### Calculations for FireStop Block FBB

a = block length = 230 mm = 0.23 m I = length of opening b = block width = 130 mm = 0.13 m w = width of opening t = block thickness = 60 mm = 0.06 m c = % penetrant area

Area to be covered/filled by blocks

 $= I \times b \times (1-c/100) = A$ 

Fire rating up to 60 minutes Fire rating up to 120 minutes

No. of blocks required

=  $\triangle$  axt

 $\frac{=A}{h x t}$ 

Example:

I = 500 mm = 0.5 m W = 500 mm = 0.5 mArea to be covered/filled by blocks =  $0.5 \times 0.5 \times (1 - 0.3) = 0.175 \text{m}^2$  c = 30%

No. of blocks required

Fire rating up to 60 minutes

0.175.

(0.23 x 0.06)

12.68

Fire rating up to 120 minutes

0.175

(0.13 x 0.06)

22.4

# **Calculation of consumption guide**

#### Calculation for compound

I = length of the opening

b = width of the opening

d = depth as per required fire rating

C = penetrant area or cross sectional area of services

Y = coverage/yield of 1 bag in litres

Volume of compound required = volume of opening - volume of services

$$= [(lxbxd) - (Cxd)] m3$$

= 
$$[(lxbxd) - (Cxd)] \times 1,000$$
 litres

#### Example

I = 1,000 mm = 1 m

$$b = 500 \text{ mm} = 0.5 \text{ m}$$

d = 100 mm = 0.1 m

C = 20 % of opening =  $I \times b \times 20 \% = 1 \times 0.5 \times 0.2 = 0.1$ 

Y = 24 litres per 22 kg bag

Volume of compound required =  $[(1 \times 0.5 \times 0.1) - (0.1 \times 0.1)] \times 1,000$  litres

V = 40 litres

Numbers of bags required = 40
24

= 1.67 bags

#### Calculation for FIP

Estimation of large and medium size pillows in walls and floors openings of size up to 1 sq. meter.

|            |           |       |        |       |        | Length [1 | mm]    |       |        |       |        |       |        |  |
|------------|-----------|-------|--------|-------|--------|-----------|--------|-------|--------|-------|--------|-------|--------|--|

<sup>\*</sup> The above calculations do not consider wastage of material. Please consider an appropriate factor.

#### fischer Training

Fire protection seminars with certificate for professionals.

Show your competence. Become a trusted specialist of your work!

- Do the right thing quickly and safely
- Competently assess legal issues and resolve them

We will show you the options for the individual systems, tips and tricks for handling, and give you a clear, competitive advantage.

We will bring you and your employees up-to-speed in preventative fire protection.

- Basic introduction to fire protection
- Model building codes
- Fire testing standards
- Product selection criteria
- Trade and a Application areas
- Practical installations

#### Locations and dates

Please contact your fischer representative for further details on course dates.

The entire range of knowledge is shared with you by fischer fire protection experts.

# **CERTIFICATE**

We hereby certify that

has successfully demonstrated a level of competence in:

"The correct installation of fischer FireStop products"

FCPS Coated Panel & FiAM Acoustic Mastic - FiPW Pipe Wrap FFC Collar - FFRS Silicone Sealent
FFFC Compound - FiP Pillow - PBB Firestop Block - FBS Graphite Foam

And agrees to adhere to the fischer Firestop Professional Ethics (FFPE)

fischerwerke Academy 01th Feb 2017

FIRE ST@P

Dave Hanrahan Product Manager FireStop

\*This certificate is valid for one year from the date of issue

fischerwerke GmbH & Co. KG Klaus-fischer-Str. 1 72178 Waldachtal Deutschland
